Founded in 1991, TESCAN has developed a strong brand with an excellent reputation in designing and manufacturing solutions for micro- and nano-technology. TESCAN’s products consist of a series of innovative electron and light microscopy systems designed specifically to meet the needs in a broad range of fields such as materials science, life sciences, forensic sciences and the semiconductor industry. The wide array of systems installed all over the world bears testament to the TESCAN standard of first-class quality, proven technology and unparalleled customer satisfaction.

The TESCAN portfolio comprises thermionic emission SEM systems, field emission SEM systems, FIB-SEM systems, multimodal holographic microscopes and a wide range of state-of-the-art detectors.
